SUMMARY

Front-End Developer with hands-on experience in building and modernizing **enterprise software** products, including **ERP systems, Hotel Management Systems (HMS), Booking Engines, and Restaurant POS platform**.

Specialized in **Angular-based scalable UI architecture, real-time API integrations, and modern UI/UX transformation** of legacy systems. Experienced in working on multi-module **SaaS ecosystems** where **data synchronization, performance, and usability** are critical. Strong understanding of **product workflows, dashboard systems, reporting interfaces, and role-based portals** within **enterprise applications**.

SKILLS

Frontend: Angular, HTML5, CSS3, JavaScript (ES6+), Bootstrap, NG-Bootstrap, Tailwind CSS

Backend: Node.js, Express.js, PHP, MySQL, REST APIs, JWT Authentication

Database: MongoDB, MySQL

Web & Performance: REST APIs, SEO Best Practices, Responsive Design, Cross-Browser Compatibility

Tools & Platforms: Git, GitHub, VS Code, Netlify, Google Search Console, Postman, Figma, Canva

PROFESSIONAL EXPERIENCE

Front-End Developer at [Bestman Exceed Software LLP](#) | Kolkata

[Feb 2025 - Present]

- Designed and implemented a completely **modernized UI** for the Hotel Management System
- Developing a **standalone Restaurant POS system** as part of the HMS ecosystem.
- Designed and developed a **modern booking interface** integrated with the HMS backend.
- Developed multiple hotel **websites** integrated with Booking Engine.

Front-End Developer at [Edominer Technologies](#) | Kolkata

[July 2024 - Nov 2024]

- Redesigned **dashboard layouts, workflow screens, and data management modules** in the legacy [ExpandERP software](#).
- Developed and enhanced **Vendor and Dealer portals** within the ERP ecosystem.
- Renovated ERP product website** with **modern UI and SEO optimization**.
- Improved responsiveness, accessibility, and overall product presentation**.

PROJECTS

Hotel Management System UI Transformation

- UI redesign** and redevelopment of an **enterprise-level Hotel Management System**.
- Modernized legacy interfaces into structured **Angular-based components**.
- Improved dashboard clarity and reporting accessibility.

Restaurant POS (Standalone + Real-Time Sync Architecture)

- Developing a standalone **Angular-based POS module** integrated with HMS via **real-time REST APIs** for instant order, billing, and report synchronization.
- Implemented **real-time API-based** synchronization between POS and HMS, ensuring **instant updates** of orders, billing transactions, and financial reports.
- Used **NgRx store** for centralized order and billing state management, ensuring predictable data flow across POS screens.

Booking Engine System

- Built a **dynamic Angular-powered Booking Engine** with **structured routing** and **reactive form** handling for seamless multi-step booking workflow.
- Managed booking state and selected room data using centralized **state logic** to ensure consistent data reflection across booking summary and confirmation screens.

ERP Software - Complete UI Redesign & Modernization

- Rebuilt major ERP modules using improved layout hierarchy, cleaner component structure, and consistent design patterns.
- Redesigned dashboard systems** with better data visualization clarity and improved workflow accessibility.
- Optimized complex data tables, forms, and reporting interfaces for better readability and faster user interaction.
- Enhanced **responsive behavior to ensure usability across different screen sizes**.

Online Travel Agent(OTA) for Hotels - Own Project

- Designing and developing** a secure **OTA platform** for creating hotel properties and making it live with rates and inventory like **MakeMyTrip**.
- Architected **scalable Angular-based UI components** focusing on **clean layout, usability, and performance optimization**.
- Used NgRx for state management** to handle **hotel search results, filters, room selection, and booking details** in one **central store**, making data flow more organized and predictable across the application.
- Implemented **NgRx Effects** to manage **API calls** such as hotel search, availability check, and booking confirmation, ensuring smooth UI updates and avoiding unnecessary repeated **API requests**.
